

CYOODA ONE Managed Cyber Security Service

Cyber Security built to protect small to medium size businesses.

Cyber criminals are targeting small to medium sized businesses across Australia, crippling under protected companies with ransomware, persistent malware and other sophisticated threats. It's time to fight back!

Protecting your business with the essential components that you need to stop cyber criminals in their tracks.

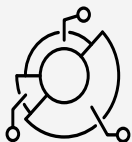

Endpoint Detection and Response

Advanced endpoint protection and response with isolation of systems in the event of malicious activity to keep the rest of your business safe.

Security Awareness Training

Turn your employees into 'Human Firewalls' arming them with the knowledge to build out and improve your organisation's security culture.

Monitoring and Logging

Proactive monitoring and logging across all of your key systems to identify unusual behaviour, malicious activity and insider threats.

Email Phishing Protection

Block email threats that have bypassed all other email security filters or systems before they reach your users' inboxes.

Vulnerability Management

Regular vulnerability scanning to identify and prioritise risk across your business and improve overall patching cadence.

Reporting and Alerting

Proactive reporting and alerting with actionable insights. We will only send alerts when action is required or a threat is verified.

CYOODA ONE DIFFERENCE

- Coverage across the attack life cycle
- Easy to use
- Remediate issues quickly
- Proactive reporting and alerting
- Filters out false positives
- Expert support
